This Issue

For Clinicians
Institute releases working papers on neck pain; DASH manual released.

For Researchers
NIOSH-funded study on WMSDs announced; Tribute for Fraser Mustard.

For Workplace
UFCW staffer and Nortel VP join Institute Board.

For Policy
Two papers addressing disability expenditures released; Mark Rochon named to Board of Directors.

This Issue's Supplement
Both a systematic review of current literature and a clinical trial conclude that there are positive benefits to corticosteroid injections in the treatment of shoulder pain, particularly for increasing range of motion.

Institute's International Congress a Success

What Works Best?
This was the question posed to the delegates of the Fourth International Congress on Medical-Legal Aspects of Work Injuries. Terrence Sullivan, president of the Institute for Work & Health explained in his opening address that the congress would explore four major themes turning on the question, “What works best?”

The first theme examined which approaches to prevention, rehabilitation, and compensation are most promising in an era of competitive trade. With globalization, trade liberalization, and technological change giving rise to state-sector reforms and firm-level practices intent on making jurisdictions more competitive, which approaches to prevention appear most efficient and promising.

A second theme asked how to address the growth of non-standard work in the prevention, rehabilitation, and compensation systems. Privatization, outsourcing, and the increasing flexibility of labour markets are realities in Europe and North America. Current legislation was not designed to accommodate these developments which have led to new employment arrangements between workers, and firms with more non-standard employment (part-time, contract, contingent, and home work).

A second theme asked how to address the growth of non-standard work in the prevention, rehabilitation, and compensation systems. Privatization, outsourcing, and the increasing flexibility of labour markets are realities in Europe and North America. Current legislation was not designed to accommodate these developments which have led to new employment arrangements between workers, and firms with more non-standard employment (part-time, contract, contingent, and home work).

The third theme addressed the increase in human and privacy rights in all advanced jurisdictions, and how they have affected the workplace and health practices. It is a constant struggle to balance the privacy needs of claimants with the process of fair compensation.

Finally, in all jurisdictions there are conflicts between the use of scientific evidence and politics in clinical, workplace, and policy decision making. There is a gap between what we know and how we treat. Aware of this, can we note any change in the balance between accommodating evidence and accommodating interests in decision-making related to workplace health?

The 1999 Congress
More than 500 delegates from 22 countries attended the Fourth International Congress on Medical-Legal Aspects of Work Injuries in Toronto this June. The Congress was hosted by the Institute for Work & Health and the Ontario Workplace Safety & Insurance Board, and held at the Park Hyatt Toronto from June 6 to 9, 1999. This international symposium of speakers from government, business and labour was previously held in Munich and Jerusalem.
The Institute for Work & Health is a knowledge-based change organization that strives to research and promote: new ways to prevent workplace disability, improved treatment, and optimal recovery and safe return-to-work.

**CHAIR**
Dr. Lorna Marsden  
President and Vice Chancellor  
York University

**VICE-CHAIR**
Marilyn Knox  
President, Nutrition  
Nestlé Canada, Inc.

**DIRECTORS**
Dr. Fraser Mustard  
Head  
The Canadian Institute for Advanced Research - The Founders’ Network

Linda Jolley  
Vice-President, Policy & Research  
Workplace Safety & Insurance Board

Andrew King  
Executive Director  
Occupational Health Centre for Ontario Workers

Pearl MacKay-Blake  
Executive Assistant to the President  
United Food & Commercial Workers International Union (UFCW) Local 1000A

Rosemary McCarney  
Vice-President  
Workforce Strategy & Employee Communications  
Nortel Networks

Heather Munroe-Blum  
Vice-President  
Research & International Relations  
University of Toronto

John O’Grady  
Labour Market Consultant, Toronto, Ontario

Mark Rochon  
President & CEO  
Rehabilitation Institute of Toronto

Terrence Sullivan  
President  
Institute for Work & Health

Len Syme  
Professor Emeritus, School of Public Health  
Department of Epidemiology  
University of California at Berkeley

Ed Welch  
Editor, On Worker’s Compensation  
Assistant Professor  
School of Labor and Industrial Relations  
Michigan State University

**NEW WORKING PAPERS TACKLE NECK PAIN**

Two recent publications in the Institute’s Working Paper series address the issue of neck injury and pain, using data from the Saskatchewan Health & Back Pain Survey. The papers were written by Pierre Côté, DC, MSc, J. David Cassidy, DC, PhD and Linda Carroll, PhD.

*Working Paper 79, Is a Lifetime Injury in a Traffic Collision Associated with Prevalent Neck Pain, Headache and Depressive Symptomatology?* was awarded best paper in the Insurance on Disability stream at the February 1999 World Congress on Whiplash Associated Disorders. Also published is *The Factors Associated with Neck Pain and its Related Disability in the Saskatchewan Population (Working Paper 80).* These papers address a number of key points.

Clinicians should be aware that disabling neck pain is associated with other comorbidities (headache, cardiovascular problems, digestive problems, low back pain) that negatively effect health. The prevalence of neck pain and disability and headaches is higher in individuals with a lifetime history of neck injury in a motor vehicle collision. No associations were found between neck pain and depressive symptoms. Future studies on the etiology of graded neck pain and disability should consider comorbidities and trauma as possible risk factors.

---

To purchase copies of these papers, please contact Laura Maniago, (416) 927-2027 Ext. 376 or by e-mail: lmaniago@iwh.on.ca. The author may be reached at pcote@iwh.on.ca. For more information on available publications visit our web site: www.iwh.on.ca.

---

**DASH MANUAL AVAILABLE FOR PURCHASE**

The Disabilities of the Arm, Shoulder and Hand (DASH) User’s Manual announced in the Spring of 1999, is now available for purchase. The manual has been designed to provide accessible information on the use of the DASH user’s manual.

---

**SOME CLINICAL NEWS**

During the last few months the Research Transfer department here at the Institute has been examining the variety of ways we communicate with our stakeholders. This new publication will be divided into two sections. The first, which will continue to be called At Work, will now contain shorter newsy articles both of general interest and of particular interest to stakeholder groups. The second section, At Work: Infocus, will continue the tradition of Linkages and Research Insights by presenting a single topic or piece of research in a more detailed, audience-specific style. The newsletter will be published every couple of months.

---

If you have any comments on the new approach to At Work please contact the editor, Chris St. Croix at atwork@iwh.on.ca.
NIOSH Funds WMSD Study at Toronto Star

The Institute for Work & Health is pleased to announce the recent awarding of a significant grant from the U.S. National Institute for Occupational Safety & Health (NIOSH) for the Institute's project investigating work-related musculoskeletal disorders of the neck and upper limb (WMSD). Principal Investigator Dr. Donald Cole, a Senior Scientist at the Institute, along with Institute staff and the collaboration of Richard Wells at the University of Waterloo will be conducting a systematic evaluation of workplace-based interventions and their effects on WMSDs.

In conjunction with the RSI Committee of the Toronto Star/Southern Ontario Newspaper Guild, the study builds upon previous research in assessing the impact of a joint labour-management program directed at prevention of WMSD among office workers. The primary comparison will be between self-reported risks for WMSD, symptoms of WMSD and disability associated with WMSD over time. The researchers also plan to access secondary data on absenteeism, health care utilization and workers' compensation to permit estimation of associated costs and determine if the program results in reduced absenteeism and cost savings compared with prior years.

DASH Outcome Measure as well as background documentation on the development of the tool.

The DASH Outcome Measure is a clinical instrument designed to measure the impact of an injury or disorder of the arm, shoulder, or hand on the daily life of the affected person.

The Honourable R. Roy McMurtry, Chief Justice of Ontario, was the guest speaker at the Gala Reception and Dinner for the 4th International Congress. A copy of his speech is available on our website at www.iwh.on.ca/99congress

Institute Hosts Tribute for Fraser Mustard

After serving as the Chair of the Institute's Board of Directors for the past ten years, Fraser Mustard is stepping down as Board Chair. In October the Institute will be hosting a gala tribute for Mustard at the King Edward Hotel in Toronto.

Guest Speaker at the tribute will be Firoz Rasul, the new Chairman and CEO of Ballard Power Systems Inc. Mustard has also recently resigned his position as Board Chair at Ballard. The evening will also feature Rob Elgie, former Minister of Labour and others paying tribute to Mustard's role in the Canadian scientific community. A specially commissioned video will also be shown.

The event will raise funds for the Mustard Fellowship, a post-doctoral position created in honour of Mustard.

For more information about this event, please contact Jackie Cooper by phone (416) 927-2027 Ext. 205, or e-mail jcooper@iwh.on.ca.
**Labour Leader joins Institute Board**

The Institute for Work & Health is pleased to announce the addition of Pearl MacKay-Blake to its Board of Directors. MacKay-Blake has worked with the United Food and Commercial Workers International Union (UFCW), Local 1000A for the past fifteen years. She became Executive Assistant to the President in 1992, with responsibility for a range of areas including Health and Safety and Workers’ Compensation. In addition, she is a vice-president on the executive board of the Ontario Federation of Labour. MacKay-Blake currently sits as a worker representative on the Food Sector Advisory Committee of the Ontario Workplace Safety & Insurance Board. A long-time advocate of workers’ rights, injury prevention, and accommodation of workers with disabilities, she is a valuable asset to the Institute’s board.

**New Chair for Institute Board**

Lorna R. Marsden, president of York University, has been elected to replace Fraser Mustard as Board Chair of the Institute for Work & Health. Marsden will chair her first meeting in September, while Mustard will continue on the Board as Chair Emeritus.

Marsden took up her position at York University in August of 1997, after serving as president and vice-chancellor of Wilfrid Laurier University since 1992. Previously, she joined the University of Toronto in 1972, where she lectured full time in the Department of Sociology until her appointment in 1984 to the Canadian Senate (Toronto-Taddle Creek). Marsden continued to teach part time until 1992, when she resigned from the Senate to begin work at Wilfrid Laurier.

The widely published and sought-after speaker currently serves as director for such organizations as Manulife Financial, the Laidlaw Foundation, and Westcoast Energy Inc. Marsden has also been president of the National Action Committee on the Status of Women (1975-77), founder and director of the Child, Youth & Family Policy Research Centre (1987-1992) and a council member of The Canadian Institute for Advanced Research.

**CAW President Buzz Hargrove addressing delegates of the 4th International Congress on Medical-Legal Aspects of Work Injuries**

**Board welcomes Nortel VP**

Rosemary McCarney, vice-president at Nortel Networks has been named to the Institute’s Board of Directors. McCarney’s department at Nortel, Workforce Strategy and Employee Communications, is responsible for developing strategies to maintain the highly-skilled workforce required by the company.

Prior to moving to Nortel, McCarney ran a consulting firm specializing in international economic development.

She received her law degree from University of Western Ontario and her MBA from Case Western. In the last 20 years, she has worked in over 40 countries and has sat on the Boards of numerous private sector, not-for-profit and community organizations.
Economics and WMSD/RSI: Coming to Grips with Economic Causes, Costs and Efficiency has been reprinted as part of the Institute’s Occasional Paper series. The paper examines current knowledge about the economics of work-related musculoskeletal disorders of the neck and upper extremities. Three issues are explored: the effect of general economic conditions, the calculation of the economic burden and the evaluation of treatments in terms of economic efficiency.

To purchase copies of this paper, please contact Laura Maniago, (416) 927-2027 Ext. 2176 or by e-mail: lmaniago@iwh.on.ca. The author may be reached at mcampolieti@iwh.on.ca. For more information on available publications visit our web site: www.iwh.on.ca.

"Connecting OH& S Research to the Workplace: Focus on Priorities."

Individuals interested in helping the Ontario Workplace Safety and Insurance Board (WSIB) focus its research funding priorities for the year 2000 are invited to participate in a one-day consultation conference, to be held by the WSIB Research Advisory Council on November 16, 1999, at the Metro Convention Centre in Toronto.

The registration fee for the conference is $65. Registration ends October 18, 1999. Space is limited.

To receive the registration form, or for more information, call (416) 344-2979.

APPOINTMENTS

Institute Researcher takes on new responsibilities

Dr. Harry Shannon has accepted a full-time position as Director of the Occupational Health Program at McMaster University in Hamilton. Shannon is a senior scientist at the Institute for Work & Health and previously held a position as Professor in the Department of Clinical Epidemiology & Biostatistics at McMaster. Shannon is currently on sabbatical and will be returning to the Institute on a part-time basis in July, 2000.
Three days of presentations and panel discussions at the 1999 Congress covered a lot of ground. Here are a number of important topics raised by the speakers.

Gunther Sokoll (Germany), in examining the question of prevention, discussed the human and economic toll of workplace injury and disease, stressing that economic factors, not social concerns, are driving globalization and that intense competitive pressures are making the task of prevention much harder. As John O’Grady (Canada) noted, there is a rapid growth in non-standard jobs where workers may face higher risks and often escape the reach of prevention systems. As well, prevention strategies that rely on worker participation may suffer from a decline in unionization. In terms of what is known, research has shown that a broad mix of strategies have been successful in several jurisdictions. More research is required, particularly in the evaluation of inspection, training and consultation programs.

The gap between research and practice was a popular topic on day two, when rehabilitation came to the fore. In particular, Jay Himmelstein (USA) drew attention to the special challenges of rehabilitation in the multi-payer environment of the U.S. In a panel discussion, the importance of employers’ and injured workers’ concerns in rehabilitation were raised. In addition, panelists expressed frustration about how rarely research is a decisive factor in what clinicians do and insurers pay for. Finally, the importance of having peer reviews was discussed as a challenge to clinical practice which is not consistent with systematic evidence.

On the last day, compensation was the topic on the floor. Clyde Hertzman (Canada) pointed out the importance of linked databases which included workers’ compensation and other health information, particularly in understanding both the determinants and the costs of workplace injury. The development of the ability to carry out multi-jurisdictional studies was mentioned by Peter Barth (USA) who suggested that this will be useful in determining which methods of delivering permanent disability benefits are most effective. John Burton (USA) revealed that in the last 10 years globalization has caused a significant reduction in workers’ compensation benefits in the United States and that Canadian jurisdictions are competitive with their American counterparts.
